## Xampp Control Panel

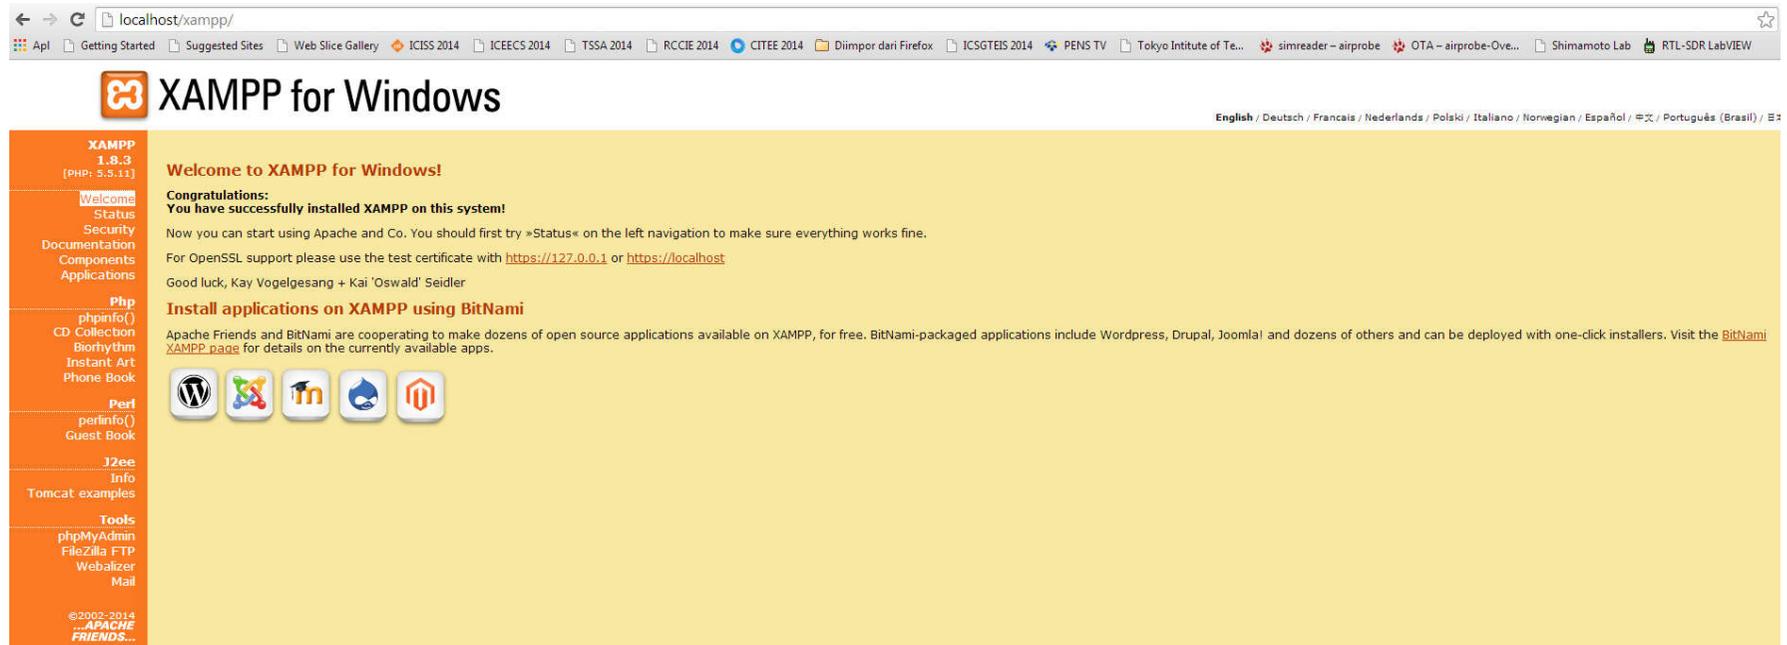

Terdiri dari beberapa modul :

- Apache → Web Server
- MySQL → Database Server
- FileZilla → FTP Server
- Mercury → Local Mail Server
- Tomcat → Web Server → JSP

# Xampp → Apache (Web Server), PHP, MySQL

## Menjalan Browser → Pengecekan Web Server (localhost)

The screenshot shows a web browser window with the address bar set to `localhost/xampp/`. The page title is "XAMPP for Windows". The main content area is yellow and contains the following text:

**Welcome to XAMPP for Windows!**

**Congratulations:**  
**You have successfully installed XAMPP on this system!**

Now you can start using Apache and Co. You should first try »Status« on the left navigation to make sure everything works fine.

For OpenSSL support please use the test certificate with <https://127.0.0.1> or <https://localhost>

Good luck, Kay Vogelgesang + Kai 'Oswald' Seidler

**Install applications on XAMPP using BitNami**

Apache Friends and BitNami are cooperating to make dozens of open source applications available on XAMPP, for free. BitNami-packaged applications include Wordpress, Drupal, Joomla! and dozens of others and can be deployed with one-click installers. Visit the [BitNami XAMPP page](#) for details on the currently available apps.

Below the text are five icons representing different applications: WordPress, Joomla!, Drupal, Apache, and BitNami.

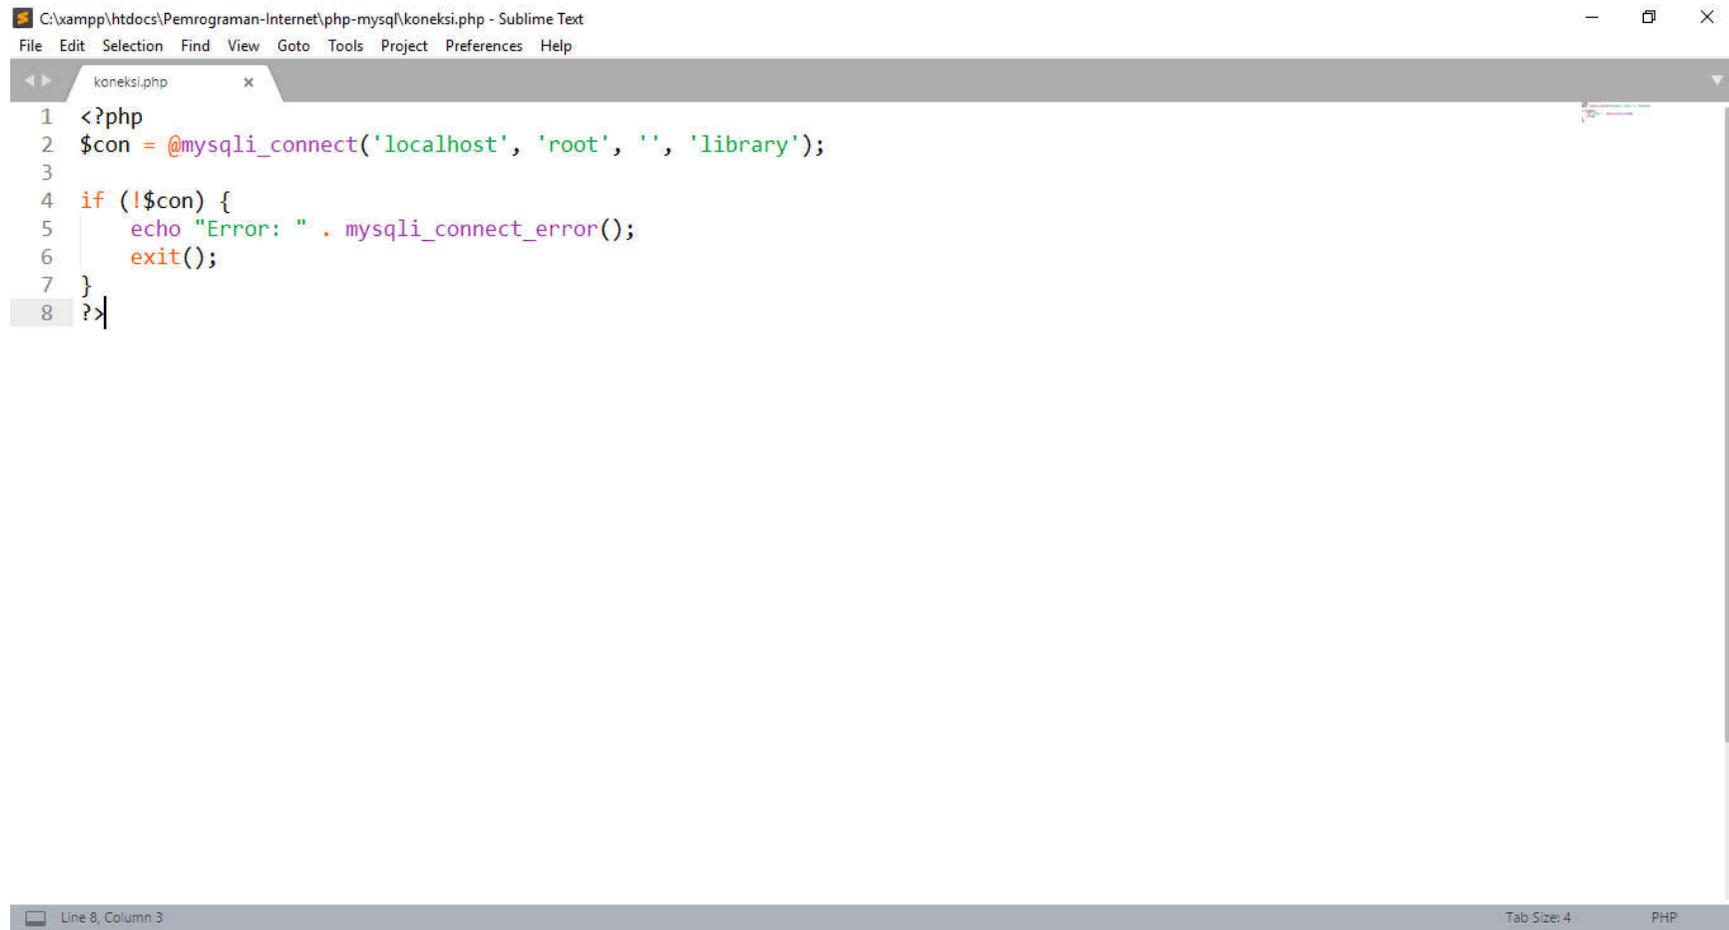

The left sidebar is orange and contains the following navigation links:

- XAMPP**
  - 1.8.3 [PHP: 5.5.11]
- Welcome**
- Status**
- Security**
- Documentation**
- Components**
